

New Weather Prediction

Magnumeter Can Forecast Conditions Two Years Ahead
 Ray Maxwell, instructor in meteorology, who has been doing research in a laboratory at the Northwestern University, Evanston, Ill., has invented a "magnumeter" to aid him in his computations.

"You can predict the world's weather for two years in advance, with the same sure that you might predict a storm for to-morrow," he asserted.

Last August, he said, he knew there would be a major storm in the Pacific Northwest in late November. In October he made it possible to predict the storm's path, and he placed a blue print of the storm in the hands of many weather men and his friends.

His new principle is based on the fact that the relative motion of the earth, moon and sun are irregular, resulting in a slight motion of the earth's wheel around the sun.

"That causes the atmosphere, which is like a fluid, to slack back and forth over the earth, just as water will slack out of a pan if the pan is jiggled," he explained.

Maxwell predicted little snow this winter and another drought next summer.

Fashions A Telescope

Western Ontario Student Makes Himself an Efficient Instrument
 A Western Ontario student, who shared a vision of a broken, windmill, and Randall Cole, of Clinton, University of Western Ontario, has made himself a telescope with the rings of a windmill.

Maxwell predicted little snow this winter and another drought next summer. He is now making a telescope out of a broken, windmill, and Randall Cole, of Clinton, University of Western Ontario, has made himself a telescope with the rings of a windmill.

For 18 months, he devoted his spare hours to the work, just as he did, and out of them, he fashioned, a telescope. He is now making a telescope out of a broken, windmill, and Randall Cole, of Clinton, University of Western Ontario, has made himself a telescope with the rings of a windmill.

Maxwell predicted little snow this winter and another drought next summer. He is now making a telescope out of a broken, windmill, and Randall Cole, of Clinton, University of Western Ontario, has made himself a telescope with the rings of a windmill.

A New Ship Elevator

Will Be Capable of Handling Vessels OF 11,000 Tons
 A ship elevator is being constructed near Richmond, Germany, about eight and a half miles north of Hamburg, where the Mittelland canal crosses the River Elbe by a large aqueduct.

The difference between the level of the water of the canal and of the river varies from about 31 feet at high tide to nearly 50 feet at low tide.

This new elevator will resemble the famous ship elevator at Nieuwediep and will be able to handle the largest of the canal ships, of 11,000 tons, but otherwise represents a different type of construction.

While the Nieuwediep elevator rises in a vertical shaft, the new one will rise on a horizontal track, the ship being carried by a large platform.

The shafts, which have now been completed, stand over 150 feet apart and are each 35 feet thick with concrete. Pillars 60 feet high carry the water through, and the shafts are supported by a large structure on an enormous concrete caisson.

Dog Has Been Faithful

For Eleven Years Has Kept Waiting for His Master
 Mary's little dog followed her to school one day. But Joan Albin's dog kept her up. For 11 years faithful Bide has followed Miss Albin to her work in the Hamilton County Jail.

Purity Flour—the very "flavours" of the season's best wheat—is always uniform and dependable—in nourishment and flavour—for cakes, pies, flaky pastry and bread. A strong flour that goes farther.

Best for all your Baking

The Trade Agreement

Almost all that can be said at this juncture in support of the Canadian-Toronto trade agreement of today, Nov. 19, 1934, is that it is a step in the right direction and should be a tribute to forwardness in the interests of a free flow of trade and commerce between the two neighbouring and friendly countries.

Both the former Canadian administration and the newly-elected Dominion government are desirous of making the agreement a reality for their respective shores in the negotiations which culminated in a pact to promote greater commercial intercourse between two states, geographically and ethnologically distinct and far apart.

Further, however, as judgment can be pronounced on the tangible benefits to be derived by the citizens of the Western Canadian prairie, and perhaps to a smaller extent by the citizens of the Dominion, which would result from the agreement, the pact has been in operation for awhile, and previous to the present agreement.

This is a statement which cannot be emphasized too strongly. For it must be borne in mind that the benefits of a reciprocal commercial agreement are not to be expected to be realized in a short time, but rather in the long run. There are good reasons for this. The amount of the duty reductions involved by it means the only factor which determines the quantity and value of the goods exchanged between the co-operating partners.

Dischance Number, Not Of Sun, Not

Previously Identified

An astronomical star census by 5

new method reported to the National

Academy of Sciences at Charlottesville,

Va., indicates the theoretical

mathematical chance of its use that

this report does not discuss the

possibilities of it, but shows a larger

number of stars than has previously

identified. Its new star census

is the first directly into the

statistical by which astronomers have

been calculating the chance that

a star will be seen. The new

census, however, does not take

into account the fact that stars

are not equally distributed in the

sky, and that the number of stars

seen in a given area is a function

of the area. The new census

Tombs Among Buddhists

A. Scientist Will Be Buried in

Chinese Monastery

The Buddhist department of the Oriental

museum has a newly completed tomb

waiting for him in the Buddhist

monastery of Ch'ing Tai, or the

Museum of the Oriental Museum.

The religious structure, 25 miles

from Peking, dates back to the third

century A.D.

In the communal graveyard, dating

back to the Ming dynasty, Mr.

Priest has his tomb. It is the typical
